DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Mizoguchi et al. [US 5,583,474] in view of Mizoguchi et al. [US 6,121,852].

Mizoguchi et al. '474 discloses an inductor [see previous office action, paper #18, mailed 9/2/2003, paragraph 2].

Mizoguchi et al. '474 discloses the instant claimed invention except for at least one slot having a different shape than the shape of the conductor formed in the magnetic layer.

Mizoguchi et al. '852 discloses an inductor device [figure 23B] including a conductor [32] having a shape sandwiched between two magnetic layers [34, 35], wherein the magnetic layers having openings [37] have a shape that is independent of the shape of the conductor.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to include slot/opening in the magnetic layers of Mizoguchi et al. '474, as suggested by Mizoguchi et al. '852, for the purpose of improving high Q inductor.

Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mizoguchi et al. '474 in view of Mizoguchi et al. '852 as applied to claims 5-7 above, and further in view of Kobayashi et al. [US 4,791,719].

Art Unit: 2832

Mizoguchi et al. '474 in view of Mizoguchi et al. '852 discloses the instant claimed invention except for the magnetic layers being connected to each other.

Kobayashi et al. discloses a magnetic device [figure 3] comprising upper and lower magnetic layers [7A, 3] and a coil conductor [5] disposed between the magnetic layers, wherein the magnetic layers are connected.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to connect the magnetic layers of Mizoguchi et al. '474, as modified, as suggested by Kobayashi et al., for the purpose of completing the magnetic circuit.

Response to Arguments

Applicant's arguments with respect to claims 5-7 and 9 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 2832

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
